

$\sigma_N = 0.5$ dB keeps 95 % of frames inside the ± 1 dB bound; 1 dB does not

--- uniform on ± 1 dB (Shellhammer & Tandra's Bayesian model)

— $\sigma_N = 0.5$ dB (main): 4.6 % of frames outside ± 1 dB

— $\sigma_N = 1$ dB (extra): 31.7 % of frames outside ± 1 dB
